

## **Systems Engineer Job Description**

### **Let's Sum it Up!**

The Systems Engineer's role is to ensure the stability, integrity, and efficient operation of the in-house information systems that support core organizational functions. This is achieved by monitoring, maintaining, supporting, and optimizing all networked software and associated operating systems. The Systems Engineer will apply proven communication, analytical, and problem-solving skills to help identify, communicate, and resolve issues in order to maximize the benefit of IT systems investments. This individual will also mentor and provide guidance to the other IT staff.

### **What You Will Do (I'm sure we will find more things along the way though!)**

- Collaborate with IT staff to ensure smooth and reliable operation of software and systems for fulfilling business objectives and processes.
- Work with executive team members, decision makers, and stakeholders to define business requirements and systems goals, and to identify and resolve business systems issues.
- Design and deploy new applications and enhancements to existing applications, software, and operating systems.
- Perform cost-benefit and return on investment analyses for proposed systems to aid management in making implementation decisions.
- Conduct research on software and systems products to justify recommendations and to support purchasing efforts.
- Interact and negotiate with vendors, outsourcers, and contractors to secure system-related products and services.
- Gauge the effectiveness and efficiency of existing systems; develop and implement strategies for improving or further leveraging these systems.
- Propose and create system design models, specifications, diagrams, and charts to provide direction to system programmer and development teams.
- Design and perform server and security audits, system backup procedures, and other recovery processes in accordance with the company's disaster recovery and business continuity strategies.
- Integrate servers, including database, e-mail, print, and backup servers and their associated software into enterprise systems.
- Ensure system connectivity of all servers, shared software, groupware, and other applications.
- Create and maintain documentation as it relates to system configuration, mapping, processes, and service records.
- Ensure compatibility and interoperability of in-house computing systems.
- Coordinate and perform in-depth tests, including end-user reviews, for modified and new systems.
- Monitor and test system performance; prepare and deliver system performance statistics and reports.
- Provide orientation and training to end users for all modified and new systems.
- Understand, follow, and promote organizational and department policies.

### **Who You Are (We want to help you grow and learn more too!)**

- Bachelor's degree and 10 years of System Engineering experience, or an associate's degree and 12 years related experience, or 15 years related experience in a systems engineer field.
- Ability to solve practical problems and deal with a variety of concrete variables in situations where only limited standardization data exists.
- Ability to interpret a variety of instructions furnished in written, oral, diagram, or schedule form.
- Proven experience in overseeing the design, development, and implementation of software systems, applications, VM Virtualization, Veeam backups and related products.
- Proven experience with systems planning, security principles, and general software management best practices.
- Excellent understanding of the organization's goals and objectives.
- Knowledge of applicable data privacy practices and laws.
- Good project management skills.
- Excellent written, oral, and interpersonal communication skills.
- Ability to conduct research into systems issues and products as required.
- Ability to communicate ideas in both technical and user-friendly language.
- Highly self-motivated and directed, with keen attention to detail.
- Proven analytical and creative problem-solving abilities.
- Able to prioritize and execute tasks in a high-pressure environment.
- Strong customer service orientation.
- Ability to work in a team-oriented, collaborative environment.
- Must be able to work outside of normal business hours and travel when business needs require.

### **Physical Demands & Environment**

Work is performed in an office environment and involves typing, talking, sitting, standing, walking, bending, reaching, and lifting of objects up to 100 pounds. While performing the duties of this job, the employee is occasionally exposed to moving mechanical parts and exposed to risk of electric shock.
